

SepticSitter.com™

Internet Connected Early Warning Alert System
Monitor Leachfields, Septic & Pump Tanks, 24/7

Create Recurring Revenue & Loyal Customers With Proactive Monitoring

- Sell more service contracts for conventional septic systems
- Retain more service relationships at time of property transfer
- Help manage aging systems
- Be alerted to minor issues before they become full blown failures
- Have the evidence to justify upgrades to your customers
- Show upgrades/repairs are working

Benefits For Your Customers:

- Maximize property value at resale
- Prevent messy sewage back-ups
- Prevent costly septic failures
- Confirm system is working
- Help manage aging systems

Retrofits To All Types Of Leachfields: Stone, Chambers, EZflow®, Eljen Also Installs In Septic Tanks, Pump Tanks & Cesspools

- Non-contact ultrasonic sensors won't get "hung up" or fouled
- Sensors install and retrofit easily – tanks, leachfields and cesspools.
- Sensor Hub connects to existing internet service at home/business
- View continuous profile of liquid levels from any connected device
- Customizable, warnings, alerts & notifications
- Low voltage, direct-bury power/communication cables

Actual Septic System Liquid Level Data

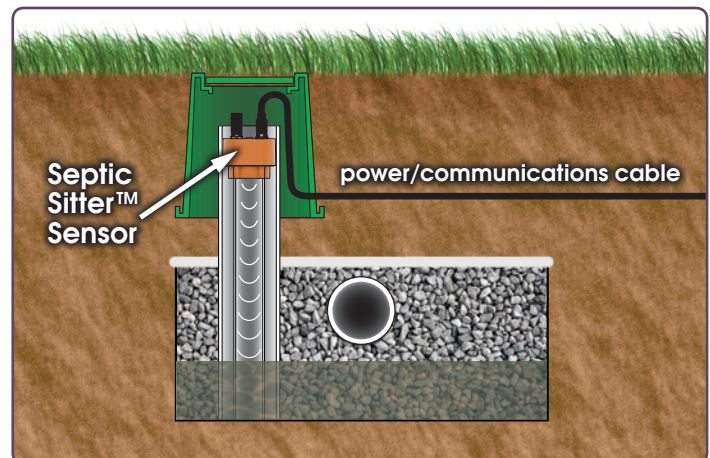

Septic tank and trickle-fed, stone leachfield. Effluent distribution is very uneven, with excessive ponding in some portions with snowmelt or rain.

Pump tank and pressure-fed leachfield. Note corresponding rise in trench levels when pump comes on. Overloaded leachfield started recovering after upgrades were made.

Early Detection/Monitoring Of:

- Hydraulic or organic overloading
- Leaking plumbing fixtures
- Surface or groundwater infiltration
- Excessive biomat development
- Clogged, dirty effluent filter
- Freezing of leachfields and tanks
- Monitoring cycles in pump tanks

Traditional stone trench installation
